

# ACRONIS® ACCESS ADVANCED

## EASY, COMPLETE, AND SAFE FILE ACCESS, SYNC AND SHARE

Acronis Access Advanced is a secure mobile access, sync, and share solution that provides enterprise IT with complete control over business content to ensure security, maintain compliance, and enable BYOD. Powered by the Acronis AnyData Engine, Acronis Access Advanced lets employees use any device - desktop, laptop, tablet or smartphone - to securely access corporate files on servers and their laptops / desktops, as well as securely share content with other employees, customers, partners, and vendors.

## BENEFITS OF ACRONIS ACCESS ADVANCED

- **Control your mobile world** – Sophisticated security controls managed by the Acronis Policy Engine give IT all the tools they need to protect the company's critical data assets.
- **Drive competitive advantage** – Advanced use of mobile devices drives faster, more informed decision-making and ultimately improves revenue, profitability, and customer satisfaction.
- **Enable BYOD** – Employees can use their preferred devices while still giving IT complete control around content access and sharing.
- **Ease of use** – Significantly increases the ROI of your mobility investment because it is easy for IT to implement and manage and easy and intuitive for employees to use.

## BEST ACCESS, SYNC, AND SHARE SOLUTION

**Content, Anywhere, Anytime** – Acronis Access Advanced lets authorized employees access, sync, and share content that resides on corporate file servers, NAS, SharePoint\*, and other data repositories using any device – iPhone or Android smart phone, tablet, laptop, PC, or Mac®.

**Scales to any Number of Users and Servers** – Acronis Access Advanced supports the largest environments with easy onboarding of new users.

**Secure In-app Editing and Annotation** – Users can create and edit Office documents and annotate pdf's within the Acronis Access Advanced mobile app, turning the mobile device into a true business platform.

**Advanced Security and Control** – The Acronis Access Advanced policy engine provides granular management capabilities to create unique security policies and ensure control and compliance for content, users and devices.

**Integration with Active Directory®** – Integrates with Active Directory® for authentication, user account management, and device enrollment.

**Web API** – A new web API lets you build custom apps and integrate Acronis Access Advanced with other products using standard Web Service calls\*.

**Web Access to File Servers and SharePoint Files \*** – Provides users with the flexibility to use the native Acronis Access Advanced app or a web browser to access business files and documents.

**Integration with Key MDM Partners** – Acronis Access Advanced integrates with MDM partners - MobileIron, Good Technology, and others - to deliver a complete enterprise mobility strategy.

**Tracking and Audit Trails** – Acronis Access Advanced provides an enterprise-class audit trail and history of all transactions, including search, filter and export functions, giving IT the visibility to see what users are doing, what documents they access, and with whom documents are shared.

**Easy-to-use User Interface** – An intuitive UI makes it simple and natural for users to use and requires virtually no training.

\*New in Version 7.0
